

// AI-NATIVE ENGINEERING · 2026

Intelligence is not a feature. It's your new operating system.

AI-Native Engineering · 2026

Engineering AI into the operations of Latin America's most demanding industries.

Not just a vendor. Your AI operations partner.

The only 100% AI-Native engineering firm in Latin America.

200+

Engineers in Production

Active squads in live operations
— not in pipeline.

100+

Enterprise Clients

Across 8 verticals including FS,
Retail, Health, Energy.

\$6B+

Value Generated

Through AI operations in
financial services alone.

40+

Active AI Squads

In live operations today across
all verticals.

15+ years

150+ FS projects

99.9% uptime SLA

8 verticals

AWS · GCP · Azure certified

PRODUCTION RESULTS. NOT PROMISES.

Your board wants AI.

Your competitors are already in production.

Every quarter without operational AI is market share you won't recover.

72%

of enterprise AI pilots never reach production.

REALITY #1

The gap is compounding.

Every quarter without operational AI is market share you won't recover.

REALITY #2

Pilot ≠ Production.

72% of enterprise AI pilots never reach production. No architecture, no governance, no integration.

72% of pilots fail to ship

REALITY #3

The question has changed.

It's no longer "should we invest in AI?" It's "do we have the right people to make it real?"

AI has left the lab. It already operates your competitor.

Curiosity

2022 – 2023

Everyone experimented. ChatGPT shocked the world. Boards demanded a strategy. Enthusiasm without execution — and no path to production.

Pilots

2023 – 2024

POCs everywhere. Impressive demos, chaotic results. 72% of projects never shipped — no architecture, no governance, no integration.

Operations

2025 – 2026

The winners separated themselves. Governance, integration, observability — all live. AI is no longer an experiment. It's the baseline.

WHERE YOU NEED TO BE

The problem isn't AI. It's execution.

"Enthusiasm without Architecture is just technical debt."

1 Pilots without Governance

Agents running with no metrics, safety guardrails, or audit trails. BACEN, CVM, LGPD don't accept "we were experimenting."

Compliance Risk

2 Tools without Integration

LLMs disconnected from systems of record, real-time data, and corporate APIs. Demos that collapse under real operational workloads.

85% of AI value locked

3 Ambition without Architecture

Strategy decks that don't survive contact with production. Great ideas held hostage by technical debt and siloed teams.

No ROI

The Sciensa Way

AI-Native from day one

01

Architecture-First

We design the foundation before any application. Architecture determines if AI can be trusted in production.

→ No rework. Survives production.

02

Day-Zero Governance

Security, compliance, RACI, and audit trails built into the blueprint on day one. Never an afterthought.

→ No compliance fire drills.

03

Full Integration

Every solution connects to critical systems — core banking, ERP, CRM, data lakes. Not floating above them.

→ AI talks to your systems from day one.

04

AI-Native Engineering

We don't adapt legacy code to support AI. We build from intelligence up. It's the foundation, not the feature.

→ Built for the era we're actually in.

// OUR JOURNEY

We didn't pivot to AI. We arrived here.

16 years building the hardest systems in Latin America's most demanding industries.

2010

SOA Expert — The Foundation

Educational institution for enterprise integration. Architecture obsession built from day one.

2014

Scienza Founded in São Paulo

Single conviction: the hardest technology problems in Latin America are in financial services. We chose the hardest vertical on purpose.

2018

Data & AI Practice Launched

The market was barely asking. We were already building production pipelines for regulated industries.

2020

200+ Engineers · AWS · GCP · Azure

Enterprise-scale infrastructure with the three major cloud partners.

2024

AI Goes Native — Lumia AI + CodeGenius

Platforms launched from real client deployments. 150+ financial services projects delivered.

2026

Latin America's only 100% AI-Native engineering firm.

200+ engineers · 40+ active squads · \$6B+ in value generated.

// SOCIAL PROOF

Trusted by the companies that power Brazil.

200+ engineers

100+ clients

150+ FS projects

40+ AI squads

\$6B+ generated

99.9% uptime SLA

15+ years

8 verticals

"We needed an assertive partner to accelerate our banking product and meet extremely tight deadlines. Scienza stepped in and dramatically sped up development — with precision, data discipline, and security at every step."

Rodrigo Borcat · Head of Engineering, iFood

Real results. Not pilots. Not demos.

Every number below is from live operations.

TELECOMMUNICATIONS · BRAZIL'S LARGEST TELCO

Customer Service AI — autonomous resolution at enterprise scale.

FINANCIAL SERVICES · INTELLIGENT COLLECTIONS

Cashier Engine — AI-driven debt negotiation in live production.

AI FOR FINANCIAL INSTITUTIONS · 40+ DEPLOYMENTS

Fraud detection and risk intelligence in live regulated environments.

Built from real deployments. Not from theory.

Two platforms refined across 20+ enterprise deployments. You inherit our learning curve.

Digital Acceleration Platform

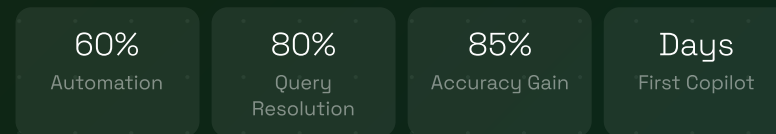

- Onboarding & KYC
- Digital Accounts
- PIX & Payments
- Risk & Compliance
- Open Banking

Pre-built compliance: BACEN · LGPD · FAPI · Open Finance

Enterprise Intelligence Platform

- Copilots & Assistants
- Knowledge Agents
- Workflow Automation
- Model Governance

You don't pay for our learning curve — you inherit 20+ deployments of institutional knowledge.

The only 100% AI-Native engineering firm in Latin America.

Pure AI engineering, in production. No legacy-adapted practice.

DIMENSION	SCIENSA	BIG 4 & LEGACY SIS
ENGINEERING APPROACH	100% AI-Native. Zero legacy adaptation. Starts AI-first.	AI bolted onto legacy consulting. Slower, architecturally compromised.
PROPRIETARY IP	Amplify + Lumia AI. Inherit 100+ projects of learning.	Reinvents the wheel every client. You pay for their learning curve.
GOVERNANCE	Day-Zero guardrails, evals, RACI built into the blueprint.	Separate phase — expensive, delayed, often never happens.
TRACK RECORD	\$6B+ negotiated, 98% autonomous resolution. Live systems.	Convincing POCs that collapse on contact with real workloads.

200+ AI models in production. 85% average accuracy improvement. 40+ enterprise deployments. This is our track record — not our promise.

The competitive gap is compounding.

The companies leading their sectors in 2028 are making this decision right now.

01

AI will transform your business.

The only variable is whether you lead that transformation or react to it.

02

The right architecture matters more than the right model.

Technology is a commodity. Execution is the moat.

03

**The right partner brings 15+ years of domain expertise,
proprietary platforms, and governance built for the industries that can't afford to fail.**

// NEXT STEP

Before you build anything — know exactly what to build.

The entry point with the lowest risk and the highest immediate value.

EXECUTIVE AI ASSESSMENT

Your AI roadmap. Board-ready. In 3 weeks.

- Agent estate diagnosis
- ROI-backed business case
- Target architecture
- 90/180/365-day roadmap
- Bounded scope, clear deliverable
- Eliminates RFP cycles
